Comment concerning a planned wind park in Lithuanian economic zone according to the Espoo convention

The Geological Survey of Sweden (SGU) received this matter for comment on 2021-12-13 and responds as follows.

Lithuania plans to build a wind park within the Lithuanian economic zone, about 33 km from Klaipeda and 77 km from the Swedish economic zone. Documentation about the project and its possible environmental impact has been produced. According to the Espoo convention Sweden has been offered an opportunity to comment on possible transboundary effects of the project.

SGU assessment is that the planned activities, from a geological viewpoint, have no transboundary effects.

This comment was decided by Lovisa Zillén Snowball, Head of Department, it was prepared by Peter Slagbrand, State geologist.
