Opinions regarding the Estonian Maritime Spatial Plan

The Swedish Transport Administration wants to stress the importance of accessibility in the sea traffic route between Stockholm and the Gulf of Riga which is described in the Swedish Maritime Spatial Plan. Especially when assessing and making decisions concerning the locations of offshore wind farms upon overlap with sea traffic areas.

Furthermore, the Swedish Transport Administration appreciates the collaboration regarding maritime spatial planning in the Baltic Sea area. It is of great importance for the continuity of the sea traffic in the region.

Rami Yones
Head of Spatial Planning
